

The Park Collection offers exceptional function and value with aesthetics that fit both rural and urban environments.

The completely modular design of the shelter allows for ease in shipping, installation, maintenance and variability in shade/weather screening materials. The angled, standing-seam roof sheds rain and provides an excellent base for optional solar lighting systems. The stadium-style bench and mesh trash receptacle with lid are proven designs.

Options for this collection include shade/weather screening of 42% perforated steel, perf-polycarbonate combination or safety glass, variations in the standing seam roofing materials, middle arms/vandal bars for the benches, connectors allowing the trash receptacles to be pole-mounted to the shelter and decorative elements at the tops of the shelter legs.
