

The Techline collection is quickly establishing itself as the shelter of choice. Constructed of round steel tubing with a metal, barrel-vaulted standing-seam roof with a more open curb appeal. Techline is designed to fit into a wide variety of environments without conflicting with existing architectural themes.

Contoured-steel seating that has extendability built-in to the design, and coupled with round-tube and curved structural elements this collection meets the needs of its users with comfort, attractive style, exceptional strength, durability, safety, vandal resistance and ADA access sensitivity. The shelter's modular design, with removable roof assembly, allows for greater value in shipping and ease of installation and maintenance.

This collection features many shelter sizes and shade screen configurations, a smaller mini-shelter with integral benches, an array of kiosk options, free-standing shade screens, resting bars, the attractive curved-arm Techline bench and other options such as solar lighting systems. Shade/weather screening choices include perforated steel, safety glass and polycarbonate.

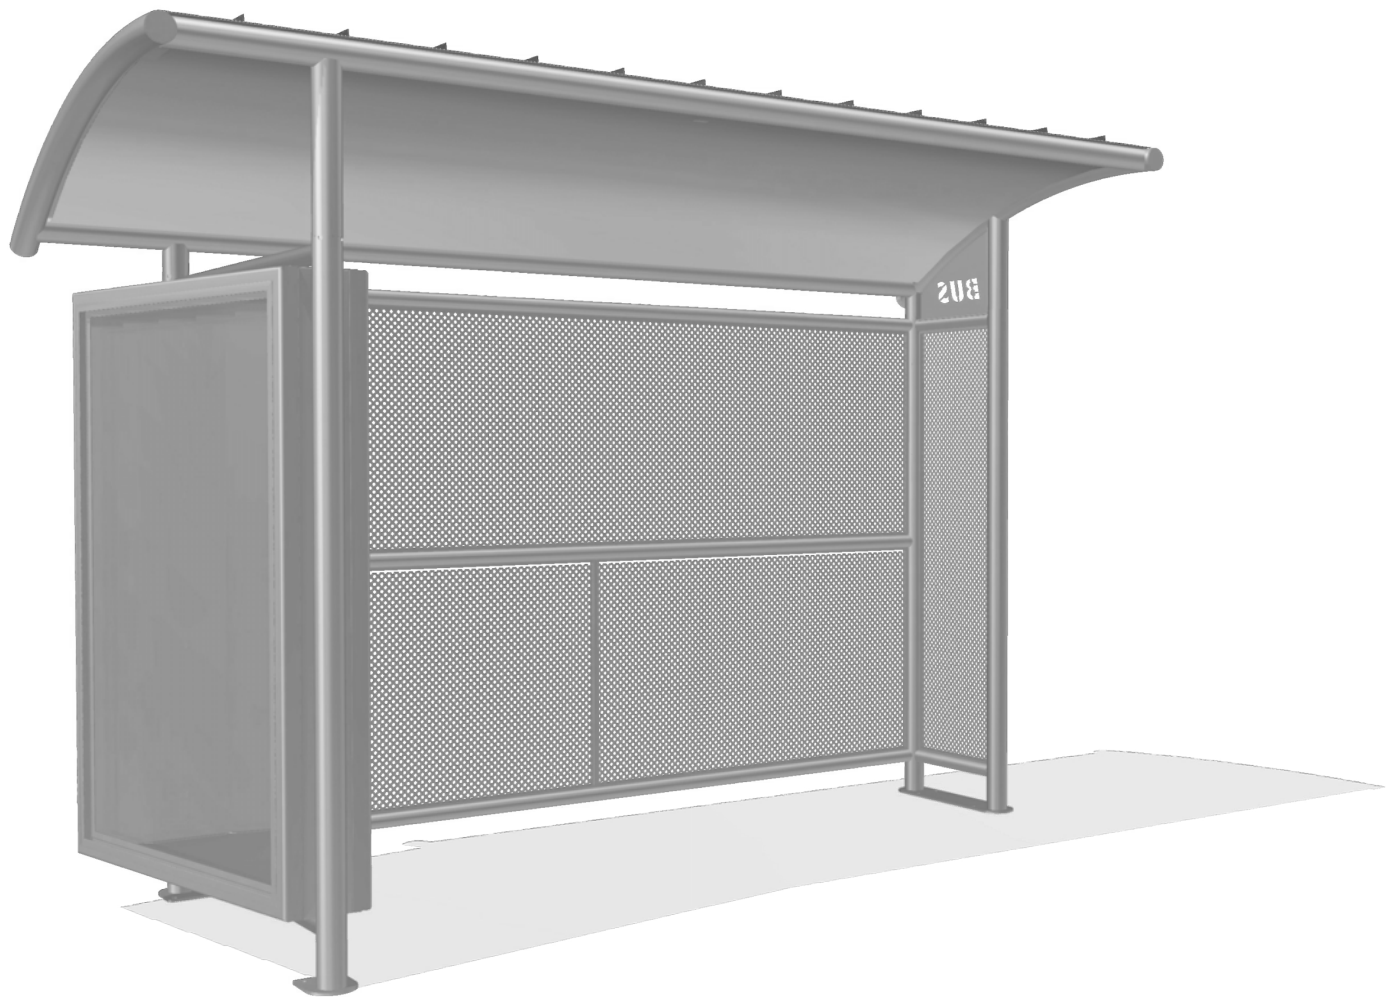

These pieces also match well with the Lacor Primavera collection benches, trash receptacles and ash urns.
